

NASA NORCAL REGIONAL SUPPLEMENTAL TO SUPER TOURING (ST) SERIES RULES

All captured ECU logs in ST class entries during competition sessions are property of NASA. If either internally or externally stored, must be made available to any official on request via thumb drive or SD card, and in a common text/excel format with headers.

ECU brand, model, SW version, and injector size must be declared to your Series Director, and is -not- public to competitors or part of your declaration form. **This supplemental does not apply outside NorCal NASA.** ECUs that can log internally must be configured to do so, and at minimum must include all airflow and/or mass measurements, injector duty cycle, and timing for the previous session length. If you can only log external, you may be required to do so at a future event, if you are not already.
